

ABSTRACT

A stand-off system for providing fixed, vertical orientation of artwork parallel to a vertical surface, the system comprising a bracket having a portion for coupling the bracket to the vertical surface and a vertical mounting plate portion, the mounting plate having a shaped opening positioned along an upper edge surface of the mounting plate portion, and a stem portion having a mounting surface for rigidly mounting the stem portion onto the artwork, the stem portion further comprising a body portion and flat head portion separated by a shaped neck portion, the head and neck portions defining a flange shaped to precisely register with the shaped opening and thereby maintain a predetermined orientation of the piece of artwork.
